20 September 2017

English only

**United Nations
Environment
Programme**

**Conference of the Parties to the
Minamata Convention on Mercury
First meeting**

Geneva, 24–29 September 2017

Item 5 (d) of the provisional agenda*

**Programme of work of the secretariat and budget
for the period 2018–2019**

Available information that might assist the committee's work

Note by the secretariat

1. In its decision 25/5 on chemicals management, including mercury, the Governing Council of the United Nations Environment Programme (UNEP) requested the Executive Director of UNEP to convene an intergovernmental negotiating committee with the mandate to prepare a global legally binding instrument on mercury. At its fifth session, the intergovernmental negotiating committee agreed on the text of a global legally binding instrument, the Minamata Convention on Mercury, which was adopted and opened for signature at the Conference of Plenipotentiaries held in Kumamoto, Japan, on 10 and 11 October 2013. In paragraph 3 of its resolution on arrangements in the interim period (UNEP(DTIE)/Hg/CONF/4, annex I), the Conference of Plenipotentiaries invited the Executive Director of UNEP to convene such further meetings of the intergovernmental negotiating committee during the period between the date on which the Convention was opened for signature and the date of the opening of the first meeting of the Conference of the Parties to the Convention as may be necessary to facilitate the rapid entry into force of the Convention and its effective implementation upon its entry into force.
2. The first meeting of the Conference of the Parties to the Minamata Convention on Mercury will have before it a number of working and information documents prepared at the request of the intergovernmental negotiating committee at its previous sessions. The secretariat is also making available to the Parties a number of background documents prepared in response to previous decisions of the Governing Council and requests by the ad hoc open-ended working group to prepare for the first Conference of the Parties on mercury and by the earlier Ad Hoc Open-ended Working Group on Mercury. The background documents include reports, toolkits and guidance documents on topics relevant to the provisions of the Minamata Convention.
3. With a view to assisting Governments in their preparations for the first meeting of the Conference of the Parties to the Minamata Convention on Mercury, the documents for the session are listed in tables 1 and 2 below (see annex). Table 1 lists general reference documents and table 2 identifies other working, information and background documents that relate more specifically to individual articles of the Minamata Convention. Each background document is identified by a capital letter which matches that used to identify the document as it appears in the appendix to the annex. A brief description of each background document listed is also provided in the appendix.

* UNEP/MC/COP.1/1.

4. The present note and the annex thereto update and expand the information contained in documents UNEP(DTIE)/Hg/INC.1/INF/6, UNEP(DTIE)/Hg/INC.2/INF/4, UNEP(DTIE)/Hg/INC.3/INF/2, UNEP(DTIE)/Hg/INC.4/INF/2, UNEP(DTIE)/Hg/INC.5/INF/2 and UNEP(DTIE)/Hg/INC.6/INF/1, UNEP(DTIE)/Hg/INC.7/INF/2, which were made available to the committee at its first, second, third, fourth, fifth, sixth, and seventh sessions, respectively. The annex is presented without formal editing.

Annex

Table 1
Working documents for the first meeting of the Conference of the Parties to the Minamata Convention on Mercury

<i>Symbol</i>	<i>Title</i>
UNEP(MC)/COP.1/1	Provisional agenda
UNEP(MC)/COP.1/1/Add.1	Annotations to the provisional agenda
UNEP(MC)/COP.1/2	Scenario note for the first meeting of the Conference of the Parties to the Minamata Convention on Mercury
UNEP(MC)/COP.1/3	Draft rules of procedure for the Conference of the Parties to the Minamata Convention on Mercury
UNEP(MC)/COP.1/4	Achievements of the intergovernmental negotiating committee to prepare a global legally binding instrument on mercury
UNEP(MC)/COP.1/5	Guidance in relation to mercury supply sources and trade (article 3), particularly in regard to identification of stocks and sources of supply (paragraph 5 (a)) and forms and guidance for obtaining consent to import mercury (paragraphs 6 and 8)
UNEP(MC)/COP.1/6	Required content of the certification required for the import of mercury from non-parties in accordance with paragraphs 6 (b) and 8 of article 3
UNEP(MC)/COP.1/7	Guidance in relation to mercury emissions (article 8) referred to in paragraphs 8 (a) and 8 (b)
UNEP(MC)/COP.1/8	Guidance to the Global Environment Facility on overall strategies, policies, programme priorities, eligibility for access to and utilization of financial resources and on an indicative list of categories of activities that could receive support from the Global Environment Facility Trust Fund
UNEP(MC)/COP.1/9	Specific international programme to support capacity-building and technical assistance
UNEP(MC)/COP.1/9/Add.1	Location options within the United Nations Environment Programme, governance arrangements and duration of the specific international programme to support capacity-building and technical assistance
UNEP(MC)/COP.1/10	Membership of the Implementation and Compliance Committee as referred to in paragraph 3 of article 15
UNEP(MC)/COP.1/11/	Timing and format of the reporting to be followed by the parties, as set out in paragraph 3 of article 21
UNEP(MC)/COP.1/12	Establishment of arrangements in regard to effectiveness evaluation as referred to in paragraph 2 of article 22
UNEP(MC)/COP.1/13	Draft financial rules for the Conference of the Parties to the Minamata Convention on Mercury and any of its subsidiary bodies, as well as financial provisions governing the functioning of the secretariat of the Convention
UNEP(MC)/COP.1/14	Revised report on proposals on how the Executive Director of the United Nations Environment Programme would perform the functions of the permanent secretariat for the Minamata Convention on Mercury
UNEP(MC)/COP.1/15	Draft memorandum of understanding between the Conference of Parties to the Minamata Convention on Mercury and the Council of the Global Environment Facility
UNEP(MC)/COP.1/16	Formats to be used in registering an exemption from the phase out dates listed in Annex A and Annex B, including the information to be provided upon registering for an exemption, and for the register of exemptions
UNEP(MC)/COP.1/17	Guidance document on the preparation of national action plans for artisanal and small-scale gold mining
UNEP(MC)/COP.1/18/Rev.1	Physical location of the permanent secretariat of the Minamata Convention on Mercury
UNEP(MC)/COP.1/19	Consideration of the report on mercury emissions related to then open burning of waste

<i>Symbol</i>	<i>Title</i>
UNEP(MC)/COP.1//20	Progress report on the work of the interim secretariat in the period since the seventh session of the intergovernmental negotiating committee to prepare a global legally binding instrument on mercury
UNEP(MC)/COP.1/21	Programme of work of the secretariat and budget for the period 2018–2019
UNEP(MC)/COP.1/21/Add.1	Programme of work of the secretariat and budget for the biennium 2018–2019 Addendum Overview of resources required for proposed activities included in the programme of work of the Minamata Convention on Mercury
UNEP(MC)/COP.1/21/Add.2	Programme of work of the secretariat and budget for the biennium 2018–2019 Addendum Overview of the resources required for staffing the proposed options for the secretariat of the Minamata Convention on Mercury and projected salary costs for the proposals on how the Executive Director would perform the functions of the secretariat
UNEP(MC)/COP.1/21/Add.3	Programme of work of the secretariat and budget for the biennium 2018–2019 Addendum Assessed contributions
UNEP(MC)/COP.1/21/Add.4	Programme of work of the secretariat and budget for the biennium 2018–2019 Addendum Overview of the resources required for each proposed option for the secretariat of the Minamata Convention
UNEP(MC)/COP.1/22	Matters for action by the Conference of the Parties under articles 3, 4, 5, 14 and 16 of the Minamata Convention on Mercury
UNEP(MC)/COP.1/23	Guidance in relation to mercury emissions referred to in paragraphs 9 (a) and 9 (b) of article 8
UNEP(MC)/COP.1/24	Guidance in relation to releases of mercury (article 9), particularly in regard to best available techniques and best environmental practices (paragraph 7 (a)) and the methodology for preparing inventories of releases (paragraph 7 (b))
UNEP(MC)/COP.1/25	Draft guidelines on the interim storage of mercury and mercury compounds referred to in paragraph 3 of article 10
UNEP(MC)/COP.1/26	Compilation of additional information on the use of mercury waste thresholds
UNEP(MC)/COP.1/26/Add.1	Compilation of additional information on the use of mercury waste thresholds Addendum: Decision in relation to article 11 forwarded from the seventh session of the intergovernmental negotiating committee
UNEP(MC)/COP.1/27	Guidance on the management of contaminated sites referred to in paragraph 3 of article 12
UNEP(MC)/COP.1/28	Updated analysis of the offer by the Government of Switzerland to host the permanent secretariat of the Minamata Convention on Mercury in Geneva, based on the clarifications received on 27 June 2017
UNEP(MC)/COP.1/INF/1	Available information that might assist the committee's work
UNEP(MC)/COP.1/INF/2	Global Mercury Partnership
UNEP(MC)/COP.1/INF/3	Activities of the Global Environment Facility
UNEP(MC)/COP.1/INF/4	Special Programme to support institutional strengthening at the national level for implementation of the Basel, Rotterdam and Stockholm

Appendix

Background documents for the consideration of the intergovernmental negotiating committee to prepare a global legally binding instrument on mercury

A. Global Mercury Assessment, December 2002 (available in English, French and Spanish at <http://www.unep.org/chemicalsandwaste/what-we-do/technology-and-metals/mercury/global-mercury-assessment>)

1. The Global Mercury Assessment was submitted to the Governing Council at its twenty-second session. It provides information on many aspects of mercury, including chemistry, toxicology, impacts on human health and the environment and global cycling of mercury. It also provides information on the uses of mercury, prevention and control technologies available at the time and initiatives for controlling releases and limiting use and exposure. It formed the basis for Governing Council decision 22/4 of 7 February 2003, in which the Governing Council concluded that mercury posed global problems and required increased action.

B1. Global Mercury Assessment 2013: Sources, Emissions, Releases and Environmental Transport, January 2013 (summary report and technical background report available in English at <http://www.sauvelaterre.com/mercaptans/imag6/942-eng.pdf>)

2. The 2013 update of the 2008 report on the global atmospheric mercury assessment was requested by the Governing Council of UNEP at its twenty-fifth session. The document was officially issued during the fifth session of the intergovernmental negotiating committee and information was made available to participants.

3. This report presents sources of mercury emissions to air and water. It presents estimates of anthropogenic emissions to air from various sources based on data from 2010 and estimates for releases to aquatic environment. The report also presents the latest information on atmospheric and aquatic chemistry, fate and transport. It is an overall summary report for policy makers based on a technical background report.

4. The Technical Background Report for the Global Mercury Assessment 2013 is a joint report of UNEP and the Arctic Monitoring and Assessment Programme (a working group under the Arctic Council) which presents the latest comprehensive information on global mercury emissions and releases to the environment, information on atmospheric and aquatic chemistry and fate and transport of mercury. The report is a fully referenced scientific background report for *Global Mercury Assessment 2013: Sources, Emissions, Releases and Environmental Transport*. It contains calculated emissions inventories for all countries.

B2. Global Mercury Modelling: Update of Modelling Results in the Global Mercury Assessment 2013 (available in English at: <https://wedocs.unep.org/bitstream/handle/20.500.11822/11440/Report-ModellingupdateoftheGMA2013.pdf.pdf?sequence=1&isAllowed=y>)

5. The report aims to update the information presented in the Technical Background Report for the Global Mercury Assessment 2013 (AMAP/UNEP, 2013) with new model simulation results and focusing on an evaluation of mercury intercontinental transport (quantifying global patterns of mercury air concentration and deposition) and source attribution of mercury deposition to major geographical regions and aquatic areas of the global ocean.

C. Summary of Supply, Trade and Demand Information on Mercury, November 2006 (available in English at <https://wedocs.unep.org/bitstream/handle/20.500.11822/11610/HgSupplyTradeDemandJM.pdf?sequence=1&isAllowed=y>)

6. The report on supply, trade and demand information on mercury was prepared to inform discussions by the Governing Council at its twenty-fourth session. The report draws upon information submitted by Governments and publicly available databases. It also specifically considers trade in mercury used in artisanal and small-scale mining. It sets out the most common sources of mercury for the global supply, the overall extent of and changes in the global supply, the range of uses of mercury and the demand for mercury in the global supply. It outlines potential scenarios for mercury demand, based both on the status quo at the time the report was prepared and on a focused mercury reduction programme. Information is provided on trends in the price of mercury and the global trade in mercury, subject to the caveat that the clandestine nature of some illegal activities makes it difficult to accurately determine the extent of all mercury trade.

D1. Toolkit for Identification and Quantification of Mercury Releases, Guidelines for inventory level 1 and level 2, April 2015 (available in English at <http://www.unep.org/chemicalsandwaste/what-we-do/technology-and-metals/mercury/toolkit-identification-and-quantification-mercury-releases>)

7. The Toolkit is intended to assist countries in developing a national mercury releases inventory. It provides a standardized methodology and accompanying database enabling the development of consistent national and regional mercury inventories. National inventories will assist countries in identifying and addressing mercury releases and thus assist them in evaluating the risks from various sources. Comparable sets of mercury source release data will enhance international cooperation, discussion, goal-definition and assistance.

8. It comprises a procedure recommended by the United Nations Environment Programme for the effective compilation of mercury source and release inventories, given that comparable sets of mercury source release data can enhance international cooperation, discussion, goal-definition and assistance. Comparable data sets also help to establish a global picture of the scale of releases as a step in prioritizing actions to control or reduce releases and enlarging the international knowledge base on mercury uses and releases.

9. The Toolkit guides the inventory developer through the different stages of identifying sources and quantifying the consumption and releases of mercury from these sources. It provides a methodology, examples and extensive information on mercury release sources. The Toolkit has been revised in 2013 based on experiences in using it and new data and exists in two versions:

10. “Inventory Level 1” provides a simplified version of the Toolkit, as well as calculation spreadsheets and a reporting template, to make the development of an overview mercury inventory considerably easier.

11. “Inventory Level 2” is the comprehensive version that includes a detailed description of all mercury sources and is useful for anyone wishing to learn more about a specific mercury release source, including environmental authorities and researchers.

D2. MercuryLearn Platform (available in English at: <http://mercurylearn.unitar.org/>)

12. Based on the Toolkit, the e-learning platform (MercuryLearn) has been developed in cooperation with UNITAR (available in English)

13. This tool is developed to introduce the Toolkit to first-time users, serve as a reference tool for trained users, and enhance the usability of the UNEP Toolkit as a standard methodology. The approach of the training platform is to provide the technical information in the Toolkit in a visual manner, with interactive activities, maps, videos and exercises. It also provides a platform for experts to exchange information and experiences in preparing inventories.

E. Guide for Reducing Major Uses and Releases of Mercury, June 2006 (available in English at https://wedocs.unep.org/bitstream/handle/20.500.11822/11588/Hg_Sector_Guide_July_2006.pdf?sequence=1&isAllowed=y)

14. The guide is intended to assist countries in strengthening their knowledge base, identifying sources of possible mercury exposure and readily assessing the viability of the main methods of reducing mercury exposures and risks to populations. The information provided reflects approaches

considered or implemented in some countries, industries or products to reduce or eliminate mercury releases, which may not apply to all situations. Whether approaches are applied in a particular country depends upon government and local priorities, information and education about possible risks, the legal framework, enforcement, implementation costs, perceived benefits and other factors.

F. Report on current supply and demand for mercury, including projections considering the phase-out of primary mercury mining, July 2008 (UNEP(DTIE)/Hg/OEWG.2/6/Add.1, available in all six official United Nations languages at mercuryconvention.org/Negotiations/OEWG2/tabid/3432/Default.aspx)

15. The report provides an assessment of whether projected demand for mercury could be met if primary mining were phased out. It also provides, based on available information, a brief summary of major sources of mercury releases by country or, if available country-level data is insufficient, by region. The report draws on, among other sources, the atmospheric emissions study prepared for the Governing Council. It covers emissions from coal-fired power plants; industrial emissions (e.g., waste combustion, non-ferrous metals and cement production); artisanal gold-mining use and emissions; and use of mercury in products and processes. Its conclusions are that, excepting the current situation in China, mercury mining is not essential. It also demonstrates that the mercury market reaches an equilibrium of supply and demand following major changes such as the closure of mercury mines in 2003 and 2004.

G. Technical and Economic Criteria for Processing Mercury-Containing Tailings, April 2010 (available in English at http://drustage.unep.org/chemicalsandwaste/sites/unep.org.chemicalsandwaste/files/publications/POPs%20Waste_Technical%20and%20economic%20criteria-2010.pdf)

16. The report includes a technical report identifying key parameters for the assessment of technical and economic opportunities for the processing of mine tailings with high levels of mercury; a description of sampling and analytical approaches for metal analysis; discussion of technical and economic aspects to be considered, taking into account the need to minimize the release of mercury into the environment; and a description of the situation and outline of possible options for a selected site in Chile.

H. Management of Mercury and Mercury-Containing Waste: Final Project Report, June 2010 (available in English at https://wedocs.unep.org/bitstream/handle/20.500.11822/12917/Draft_Report_of_Mercury_Waste_management_results_WS-Aberdeen_2010.pdf?sequence=1&isAllowed=y)

17. The five-country project on mercury waste management was implemented from 5 November 2008 until 30 June 2010. The project included four countries – Burkina Faso, Cambodia, Pakistan and the Philippines – that were financed by the Government of Norway. The participation of Chile was made possible with funds from the Mercury Trust Fund. This project deals with the management of mercury and mercury-containing waste and will contribute to the United Nations Environment Programme (UNEP) priority area on harmful substances and hazardous wastes under its medium-term strategy with the ultimate goal of minimizing the impact of harmful substances and hazardous wastes to the environment and human beings.

I. Study on the possible effects on human health and the environment of the trade of products containing lead, cadmium and mercury in Latin America and the Caribbean, Asia and the Pacific and Africa (available at http://drustage.unep.org/chemicalsandwaste/sites/unep.org.chemicalsandwaste/files/publications/GAELP_PUB_UNEPLeadPb-CaicedoCompilation110601.pdf)

18. UNEP has prepared, with financial support from the Nordic Council of Ministers and the assistance of Grupo GEA (Peru) and the International POPs Elimination Network, studies on the analysis of the trade flows and review of environmentally sound management practices related to products containing lead, cadmium and mercury in Latin America and the Caribbean and in Asia and the Pacific. These studies were presented to the UNEP Governing Council/Global Ministerial Environment Forum at its twenty-sixth session, held in Nairobi in February 2011, as documents UNEP/GC.26/INF/11/Add.3 and UNEP/GC.26/INF/11/Add.4, respectively. In 2008, with the financial support of the Government of Sweden, UNEP had conducted a study on the possible effects on human health and the environment in Africa of the trade of products containing lead, cadmium and

mercury, which was noted by the UNEP Governing Council/Global Ministerial Environment Forum at its twenty-fifth session in February 2009.

J. Overarching Framework: UNEP Global Mercury Partnership, June 2009 (available in all six official United Nations languages at https://wedocs.unep.org/bitstream/handle/20.500.11822/11378/Overarching_Framework.pdf?sequence=1&isAllowed=y)

19. The Overarching Framework guides the work of the UNEP Global Mercury Partnership. It has been developed under the auspices of the Executive Director in consultation with Governments and other stakeholders. The document was forwarded to the Governing Council at its twenty-fifth session where progress made by the Partnership was welcomed and the continued involvement of UNEP in the Partnership was endorsed.

K. Analysis of formalization approaches in the artisanal and small-scale gold mining sector based on experiences in Ecuador, Mongolia, Peru, Tanzania and Uganda, June 2012 (available in English at https://wedocs.unep.org/bitstream/handle/20.500.11822/11357/Formalization_Document_Final_June_2012.pdf?sequence=1&isAllowed=y)

20. The document is a synthesis for policymakers and other interested stakeholders on the formalization of the artisanal and small-scale gold mining sector, based on the analysis of the case studies developed by international experts for Ecuador, Mongolia, Peru, Tanzania and Uganda and drawing upon examples from other countries. The goal of the document is to highlight critical elements of formalization processes, including institutional considerations, legislation development or reform, and financing. The analysis identifies key strategic lessons and recommendations, which inform the debate, and lessons learned that may be applicable in other countries.

L. Reducing Mercury Use in Artisanal and Small-scale Gold Mining: A practical guide, June 2012 (available in English, French and Spanish at http://wedocs.unep.org/bitstream/handle/20.500.11822/11524/reducing_mercury_artisanal_gold_mining.pdf?sequence=1&isAllowed=y)

21. The document has been produced with a view to sharing information with policymakers, miners and civil society about available technologies and approaches for reducing, and ultimately eliminating, mercury use in artisanal and small-scale gold mining (ASGM). It is rich in graphics with the aim of being a simple educational and planning tool for improving practices in ASGM. It is also hoped that the public will find parts of this booklet an accessible and informative resource with which to learn more about the often misunderstood ASGM sector.

M. Economics of Conversion to Mercury-Free Products, October 2011 (available in English at http://wedocs.unep.org/bitstream/handle/20.500.11822/13871/UNEP_Economics_of_Conversion_to_Mercury-free_Report_Final_102611_finaldraft_wAPP.pdf?sequence=1&isAllowed=y)

22. The report takes into consideration the case studies of two firms involved in the transitioning from mercury-containing to mercury-free products in the medical technology industry. Despite the different supply chain locations of the firms, both were able to produce mercury-free products of the same quality as mercury-containing products. These products included hearing aid batteries, thermometer batteries and most sphygmomanometer applications. However, due to a lack of a legally binding agreement, the study concludes that producers willing to invest in the production of mercury-free devices are also required to continue producing mercury-containing products. This scenario decreases competition for innovation amongst mercury-free suppliers, prevents firms willing to invest in the sector from reaching economies of scale at a faster pace and ignores the fact that sufficient mercury-free capacity exists to meet consumer demand. Legislation and increased market demand would facilitate the shift to mercury-free products.

N. A guide for managing mercury waste at household and community level, August 2011 (available in English at <http://wedocs.unep.org/bitstream/handle/20.500.11822/13760/2011.10.24-Brochure-English.pdf?sequence=1&isAllowed=y>)

23. The brochure was developed by the Foreign Economic Cooperation Office of the Chinese Ministry of Environmental Protection for UNEP, supported by the Government of Norway through UNEP. As a large mercury producer and consumer, the Chinese Government has carried forth national and international efforts to reduce mercury pollution. The development of the awareness-raising toolkit was part of a project that included pilot dissemination, assessment and project summary evaluation. The project concluded that the public has very limited basic knowledge about mercury pollution and is in urgent need of large-scale, targeted and systematic publicity and education.

O. Process Optimization Guidance (POG) for Reducing Mercury Emissions from Coal Combustion in Power Plants (report and software, available in English, Chinese and Russian at <http://www.unep.org/chemicalsandwaste/global-mercury-partnership/coal-combustion/process-optimization-guidance>)

24. The POG is a tool that has been developed to help determine appropriate approaches to control mercury emissions in individual coal fired power plants. Though the POG has been developed for coal fired power plants, it is generally also applicable to large industrial coal-fired boilers. It is available in English, Chinese and Russian. The POG summarizes mercury emission reduction practices and technologies including:

- energy efficiency improvement measures
- pre-combustion control measures (e.g., coal blending, coal cleaning)
- optimizing other (single) air pollutants control technologies to maximize mercury removal
- mercury-specific control technologies
- multi-pollutant control technologies

25. The POG has been reviewed by experts in the network of the UNEP Coal Combustion Partnership area, including national experts in Russia, China and South Africa, and others through an open review process.

26. The POG has been further developed into user-friendly freeware, the Interactive Process Optimization Guidance (iPOG™), that calculates Hg emission rates from coal-fired utility plants burning any single coal or coal blend. The software requires the entry of data on coal properties, burning conditions and flue-gas cleaning configuration and conditions. With this information, the iPOG™ calculates Hg emission reductions that can be achieved with different coal pretreatments (washing and blending); with the most common pollution controls, including systems with only particle collection devices and with various combinations of pollution controls (ESP/FGD and SCR/ESP/FGD); and with Hg specific controls such as injection of conventional carbon sorbents, brominated carbon sorbents, and oxidising agents. The iPOG™ also calculates the Hg captured in the bottom and fly ashes, depending on the coal characteristics and combustion conditions (no plant emits 100% of the mercury in coal).

P. Global Chemicals Outlook: Towards Sound Management of Chemicals. Synthesis Report for Decision Makers, September 2012 (available in the six official United Nations languages at <https://sustainabledevelopment.un.org/content/documents/1966Global%20Chemical.pdf>)

27. The synthesis report for decision makers describes the main findings and conclusions of the full report “Global Chemicals Outlook: Towards Sound Management of Chemicals.” The report was developed by UNEP in collaboration with the World Health Organization. It was also developed in collaboration with the Organization for Economic Cooperation and Development and other member institutions of the Inter-Organization Programme for the Sound Management of Chemicals and reflects the work of the Global Chemicals Outlook Steering Committee, which is composed of representatives of Governments, the private sector, civil society and academia.

Q1. Promoting the ‘phase down’ Approach of Dental Amalgam in Developing countries – final report, October 2015 (available as a brochure at http://www.who.int/oral_health/publications/2014_dental_mercury_phase_down_project_brochure_19nov.pdf?ua=1)

28. This report presents the work conducted by UNEP and WHO in collaboration with the World Dental Federation (FDI) and the International Association of Dental Manufacturers to implement a demonstration project for phasing down the use of dental amalgam in Tanzania, which was part of the larger East African Dental Amalgam Phase-down Project (EADAP) also conducted in Kenya, Tanzania and Uganda. It included a study on trade flows of dental amalgam and its alternatives, capacitated dentists on the use of alternatives to amalgam for dental restorations and investigated dental amalgam waste practices. Best management practices for dental amalgam were demonstrated for the 3 countries, and weaknesses in the current safety and management practices were highlighted.

Q2. Lessons from Countries Phasing Down Dental Amalgam Use, March 2016 (available in English at <https://wedocs.unep.org/bitstream/handle/20.500.11822/11624/Dental.Amalgam.10mar2016.pages.WEB.pdf?sequence=1&isAllowed=y>)

29. In order to assist countries in the phase-down process, the UNEP Chemicals and Waste Branch commissioned the Mercury Policy Project, a project of the Tides Center, to develop this brochure based on specific steps taken and methods used by countries that have already significantly reduced or eliminated the use of dental amalgam.

R. The United Nation's Framework Convention on Climate Change and the Minamata Convention on Mercury: A comparison for the coal combustion sector, May 2015 (available in English at <https://wedocs.unep.org/bitstream/handle/20.500.11822/11444/ReportFINAL-UNFCCC-Minamata-coalcombustion8June2015.pdf?sequence=1&isAllowed=y>)

30. This report compares how the UNFCCC and the Minamata Convention seek to control their respective pollutants and the implications of these approaches for the coal combustion sector. The aims and modalities of the two conventions are juxtaposed and mutual benefits of the actions under the two conventions are explored, as are areas of potential bridge building. The report pays special attention to the need for technological advancements to reduce greenhouse gas and mercury emissions from coal combustion sector in light of a growing global demand for coal, especially in developing economies.

S. Practical Sourcebook on Mercury Waste Storage and Disposal, UNEP, September 2015 (available in English at https://wedocs.unep.org/bitstream/handle/20.500.11822/9839/-Practical_Sourcebook_on_Mercury_Waste_Storage_and_Disposal-2015Sourcebook_Mercruy_FINAL_web.pdf.pdf?sequence=3&isAllowed=y)

31. The ‘Practical Sourcebook on Mercury Waste Storage and Disposal’ is an informative tool that aims to enhance capacities of governments and other relevant stakeholders, in particular from developing countries and countries with economies in transition, to store and dispose mercury wastes in an environmentally sound manner. The Sourcebook is a practical reference document, rather than a detailed technical guidance, illustrating the various options and technologies available on mercury waste management for decision-makers. It is based on experiences and lessons learnt and contains decision trees, flow charts, photos and a number of case studies. These will help the reader to make informed decisions against the background of their particular domestic circumstances
