CAPACITY BUILDING, TECHNICAL ASSISTANCE AND TEGCHNOLOGY TRANSFER

- 1. Capacity building programmes and Technical assistance in the following areas:
- i. Establishment of a sustainable system for the collection, monitoring and interpreting data on mercury use, trade, emissions, releases and disposal.
- ii. Customs and regulatory officials on the control of illegal import of mercury containing products into the country.
- iii. Dental professionals and students in the use of mercury free dental restoration techniques and materials/Best management practices at dental clinics in the use of dental amalgam.
- iv. Establishment of an environmentally sound system for the collection and interim storage facility for mercury-containing waste products.
- v. Technical officers on mercury management, accessing financial opportunities for Sound Management of Chemicals and negotiation techniques to enhance their ability to implement and meet the country's obligations under the Convention.
- vi. Institutionalization of safer mining programmes.
- vii. Upgrading of identified laboratories for specialized chemical analysis including mercury.
- viii. Study tours to mercury management facilities that meet the convention's requirements.
 - 2. Technology transfer and Technical assistance are required in these areas:
 - a. BAT and BET for retrofitting of existing industries (point source of mercury) lacking the appropriate mercury pollution abatement technology.
 - b. Mercury free gold processing techniques for Artisanal Small Scale Gold miners.
 - c. Environmentally sound disposal of mercury and other hazardous waste.
- 3. Mercury emissions resulting from the open burning of waste. The inventory of mercury emissions and releases using the UNEP Toolkit Inventory Level 2 (2017) shows that mercury emissions from informal waste burning is 10,900Kg Hg.
